PROFESSIONAL SUMMARY

Full Stack Developer with 1+ year of hands-on experience building and shipping production-grade MERN stack applications serving 100+ active users. Cut API response times by **30%**, slashed release cycles by **50%** via GitHub Actions + Docker CI/CD, and eliminated **40%** of manual desktop workflows through Python automation. Experienced across the full delivery lifecycle — from REST API design and JWT security to AWS EC2 provisioning and zero-downtime deployment. Currently pursuing B.Tech in Computer Science Engineering at Pimpri Chinchwad University (graduating 2027); hold AWS Certified Cloud Practitioner and Coursera Full Stack Development certifications.

TECHNICAL SKILLS

Languages:

C, C++, JavaScript (ES6+), TypeScript

Frontend:

React.js, Next.js, Redux, HTML5, CSS3, Responsive Web Design

Backend:

Node.js, Express.js, REST API Design, JWT Authentication, Middleware Architecture

Databases:

MongoDB (indexing, aggregation), MySQL, Query Optimization

Cloud / DevOps:

AWS EC2, AWS S3, Docker, GitHub Actions, CI/CD Pipelines, Vercel

Engineering:

Data Structures & Algorithms, DBMS, OOP, System Design, Agile / Scrum

PROFESSIONAL EXPERIENCE

Full Stack Developer Intern

Jan 2024 – Present

Self-Directed / Freelance Project Work | Remote, India

- Launched 3 production web applications using MongoDB, Express.js, React.js, and Node.js — each live within 2 weeks of kickoff and serving real user traffic from day one.
- Optimized REST API layer by introducing query caching, route-level compression, and trimmed middleware chains, reducing average response time by **30%** (420ms → 295ms).
- Hardened application security with JWT access tokens, HTTP-only refresh cookies, and granular role-based permissions — zero unauthorized access reports across all three products.
- Automated build, test, and container push stages in GitHub Actions; Docker-based release pipeline cut deployment time from 2 hours to 55 minutes (**54% faster**).
- Configured AWS EC2 load balancing and S3 static hosting, sustaining **99.9%** uptime over 6 months and keeping infrastructure cost under \$15/month per project.
- Managed 5 Git repositories across a 3-developer Agile team — reviewed 30+ pull requests per sprint, enforcing coding standards that reduced post-merge bugs by 25%.

KEY PROJECTS

EasyKart — E-Commerce Platform

2025

Stack: React.js, Node.js, Express.js, MongoDB, Redux, JWT, AWS EC2

- Delivered a fully functional shopping platform in 6 weeks — product catalog, cart, checkout, order tracking, and payment flow supporting 100+ concurrent users.
- Reduced average MongoDB query latency by **30%** through compound indexing and aggregation pipelines, eliminating 3 redundant round-trips per page load.
- Developed an admin dashboard covering inventory control, order status updates, and a sales analytics view — replaced a manual Excel-based tracking process entirely.
- Achieved zero downtime across 4 production releases using AWS EC2 with environment-specific config injection and a blue-green-style swap strategy.

Stack: *Python, SpeechRecognition, pyttsx3, OpenAI API, OS Automation*

- Developed a voice-controlled desktop assistant that identifies and executes 50+ commands (file ops, browser control, app launching) with an average response latency under 1.5 seconds.
- Automated 12 recurring desktop workflows via natural-language triggers, cutting daily manual task time by **40%** (roughly 45 minutes saved per day).
- Structured the codebase around a plugin-style command registry — adding a new command requires fewer than 10 lines and zero changes to core interpreter logic.

CodeGuard — Automated Code Review Bot

Stack: *Node.js, Docker, GitHub Actions, ESLint, Static Analysis*

- Integrated automated static analysis, ESLint checks, and Jest coverage reports into every GitHub pull request — issues surface before any human reviewer opens the diff.
- Containerized the entire analysis runtime in Docker, guaranteeing byte-for-byte identical results across 4 developer laptops and the GitHub-hosted cloud runner.
- Decreased average pull request turnaround from 3 days to 1.5 days (**50% faster**) by offloading style and coverage checks to the bot, freeing reviewers for logic-level feedback.

EDUCATION

B.Tech in Computer Science Engineering

Pimpri Chinchwad University, Pune, Maharashtra

CERTIFICATIONS

- **Full Stack Web Development** — Coursera (2024) | Covered React, Node, MongoDB, REST APIs, and deployment workflows
- **AWS Certified Cloud Practitioner** — Amazon Web Services (2024) | Cloud fundamentals, EC2, S3, IAM, pricing models
- **Red Hat Linux System Administration** — Red Hat (2024) | Shell scripting, process management, networking basics
